

Temposonics®

Absolute, Non-Contact Positions Sensors

MH-Series Analog Redundant

Temposonics MT Measuring length 50 - 2500 mm

Redundant Sensor for Mobile Hydraulics

- Redundant Sensor System
- Linear, Absolute Position Sensors
- Non-Contact Sensor Technology with Highest Durability
- Superior Accuracy: Linearity Tolerance < 0.04 % F.S.
- Hysteresis ± 0.1 mm
- Direct Analog Displacement Output: Current or Voltage
- Power Supply: 12/24 VDC
- Shock Rating 100 g (single hit) / IEC 68-2-27
- Vibration Rating 15 g / 10-2000 Hz / IEC 68-2-6

Designed for the mobile world

MH-Series sensors were designed with the "mobile" world in mind, and have been validated in the field by customers worldwide. They are availabe with a redundant output for safety sensitive applications. Performance is second tonone; high accuracy, position output. Ruggedness is "designed in"; 100 g shock rating. Cable and wire options are sized for direct connection to proven connectors. The model MT sensor can be fully sealed and embedded in a cylinder to ensure a long operating life.

Magnetostriction

The absolute **Temposonics**[®] linear position sensors are based on the MTS developed magnetostrictive measurement principle. That combines various magneto-mechanical effects and uses the physical height precise speed-measurement of an ultrasonic wave (torsion pulse in its sensor element) for position detecting. Sensor integrated signal processing transforms the measurements directly into market standard outputs. The contactless principle - an external movable magnet marks the position - eliminates the wear, noise and erroneous signal problems and guarantees the best durability without any recalibration.

Measuring Principle

Measuring Prinicple (simplified illustration)

Temposonics $^{\otimes}$ -MT - Redundant Sensor for Mobile Applications Measuring Range 50 - 2500 mm.

The robust Temposonics MT sensor's stainless steel housing is designed for direct stroke measurement in compact standard hydraulic cylinders. MT type sensors are ideal choices for a wide range of hydraulic cylinders. Magnetostrictive displacement sensors, high quality cylinders and precise con-trol valves form ideal driving systems for technically demanding of mobile hydraulics.

Simple Mechanics

The extremely rugged sensor consist of 3 main parts and has two independent sensors "embedded" in one single housing.

- The flange housing with independent signal converter and built-in electronics
- The pressure-proof sensor pipe (up to 350 bar) with flange, fits into the bored piston rod, protects two internal sensing elements, the waveguide systems.
- The position magnet, only moving part, is mounted on the piston bottom This permanent magnet travels wearfree and contactless along the stationary sensor tube.

Temposonics[®] Connector System M12

MTS presents the innovative Connector System for Temposonics® MH-Series The Temposonics® Connector System meets the most exacting protection requirements important for the difficult environmental conditions of mobile hydraulics applications. Protection type IP69K makes the robust metal housing not only completely dust- and waterproof, even the harshest cleaning measures can not damage the sensor.

- A The MH sensor is delivered by MTS together with the new Connector System: The connector insert carrier is already connected to the sensor conductors, i.e. no soldering, any colour or connection mistake.
- **B** The connector insert is taken out of the cylinder through a bore hole. The flange housing can be clicked in position easily from outside.
- **C** Four standard screws must be tightened to mount the Connector System on the cylinder.
- **D** With a corresponding mating plug the Connector System fulfills an IP rating of IP69K.

Temposonics MT Redundant Sensor

MH-Series model MT sensors were designed with the mobile world in mind and apply specifically to applications that require redundancy. They help lower overall costs by increasing safety, availability and reliability and reducing service costs. MH-Series sensors are designed specifically for position sensing applications in rugged environments typically encountered by construction, agricultural and other off-highway machinery and have been validated in the field by customers worldwide. Their performance is second-to-none. Ruggedness is "designed in" along with 100 g shock and 15 g vibration rating. Cable wires are sized for direct connection to industry proven connectors. The model MT can be fully sealed and embedded in a cylinder to ensure a long operation life.

*max. mechanical burden, e.g. by cir-clip, lock washers etc.

All dimensions in mm. All rights reserved

Analog Redundant

Mechanical Installation

The robust Temposonics[®] model MT sensor's new stainless-steel housing is designed for direct stroke measurement in hydraulic cylinders. The Temposonics[®] MT sensor can be installed from the head side or the rod side of the cylinder depending on the cylinder design.

Example

Sensor Installation

The method of installation is entirely dependent on the cylinder design. While the most common method of installation is from the rod side of the cylinder, installation from the head side of the cylinder is also possible. In both installation methods, the cylinder is sealed by 0-ring and backup ring which is ready installed on the sensor housing.

1. Installation in magnetic Material with Spacer

2. Installation in non-magnetic Material without Spacer

Installation Notes

• Use a non-ferrous circlip to fix the magnet.

• The bore in the piston rod is dependent on hydraulic pressure and piston velocity etc. The minimum drilling should be 13.5 mm (10 mm rod).
